DETAILED ACTION

Allowable Subject Matter

Claims 1-32 are allowed.

The following is an examiner's statement of reasons for allowance: prior art, U.S. Patents # 5,483,390 and # 4,952,867, does not teach nor render obvious a power amplifier circuit that has, in combination with other limitations, a control circuit for generating the control signal for provision to the controllable current source, the control signal for being generated in dependence upon the supply voltage, where for the supply voltage having a first potential the variable bias current provided to the first amplification stage is smaller than for the supply voltage having a second potential that is lower than the first potential; nor does it have a circuit for biasing a power amplifier circuit that has current control circuitry for sensing a potential of the supply voltage at the supply voltage input port and for generating the control signal, where the control signal is for resulting in an increasing variable bias current with a decreasing supply voltage sensed on the supply voltage input port which results in the second amplification stage to transition from a linear mode of operation to a saturation mode of operation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patents # 5,483,390, # 4,952,867, # 6,750,719 B2, and # 5,942,946 contain some limitations of the claimed invention.
